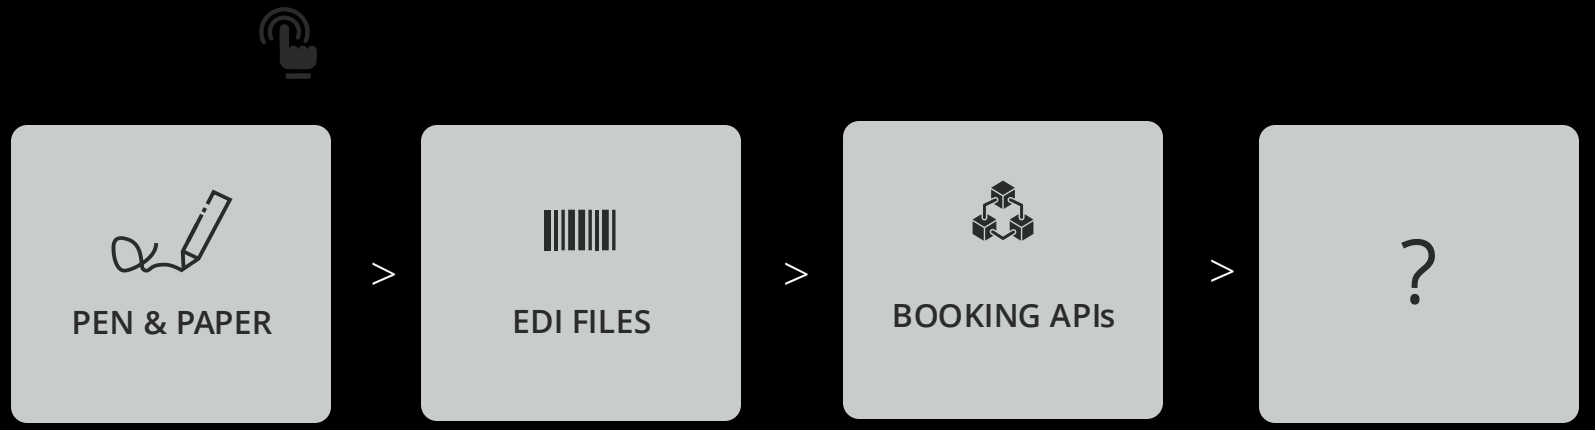
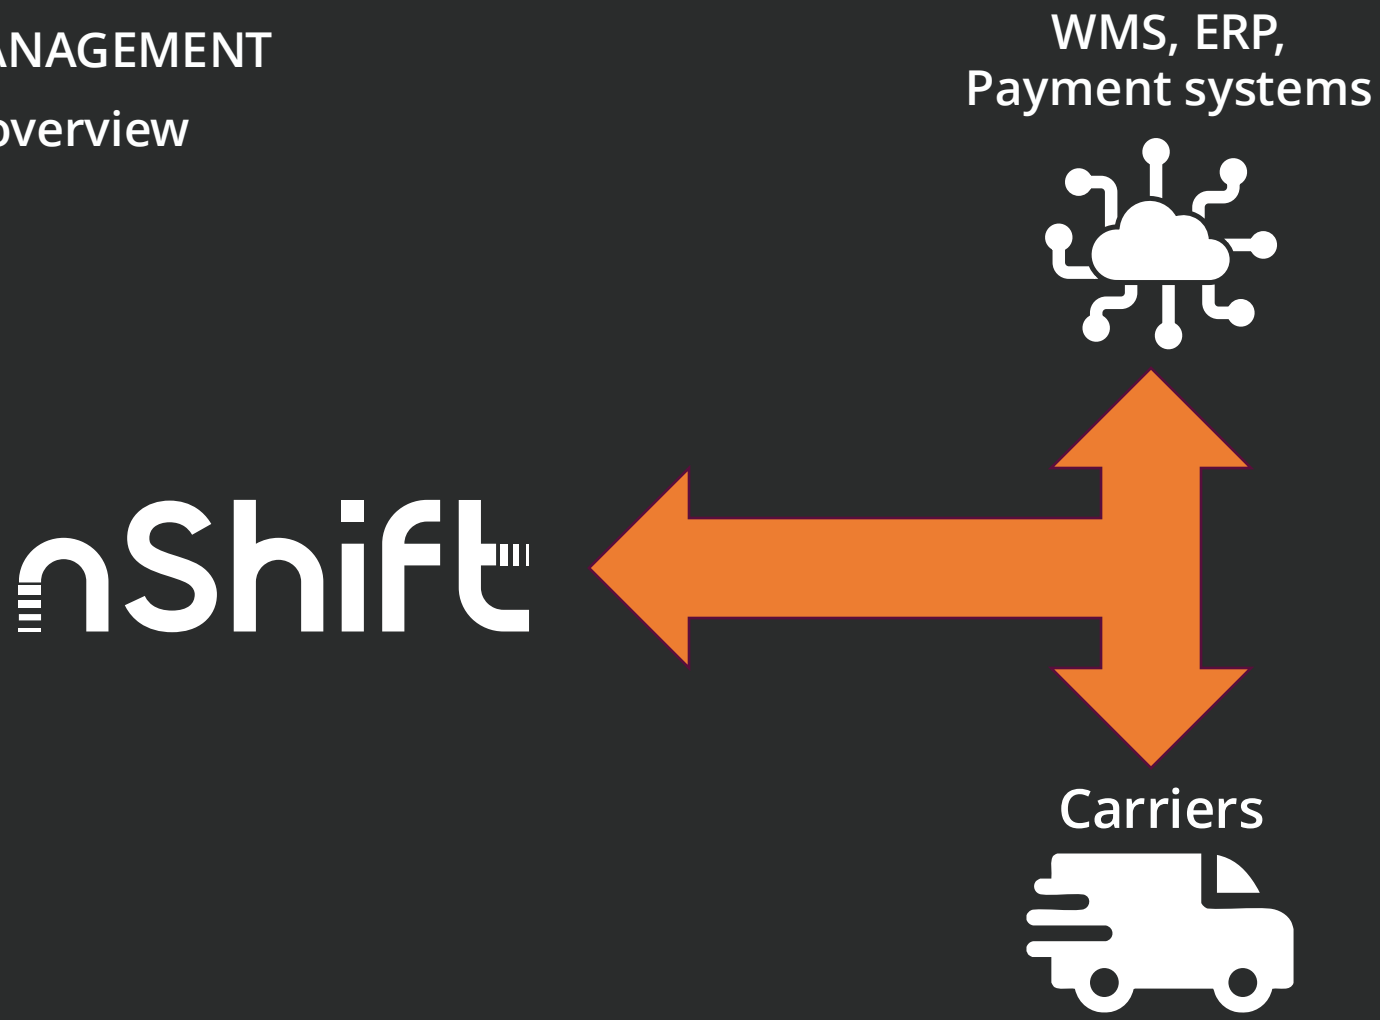
DELIVERYMANAGEMENT – THE HISTORY

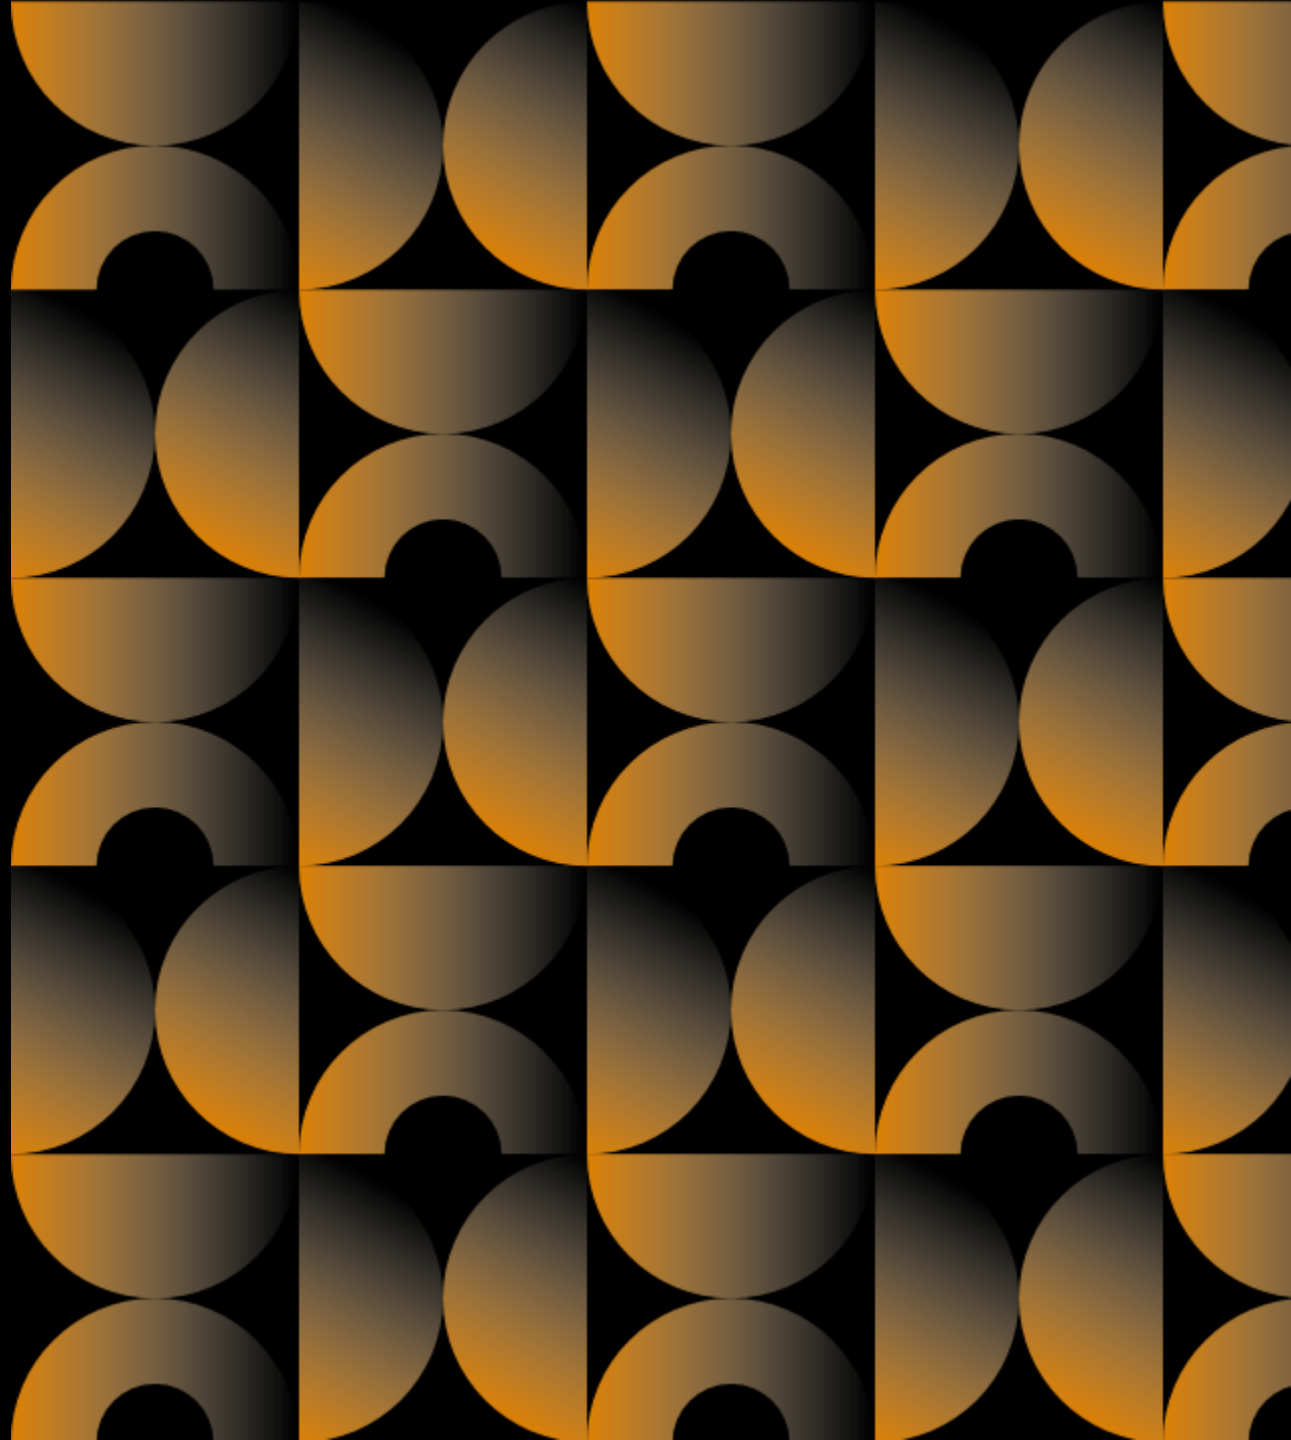


DELIVERYMANAGEMENT

Integration overview



POLLTIME

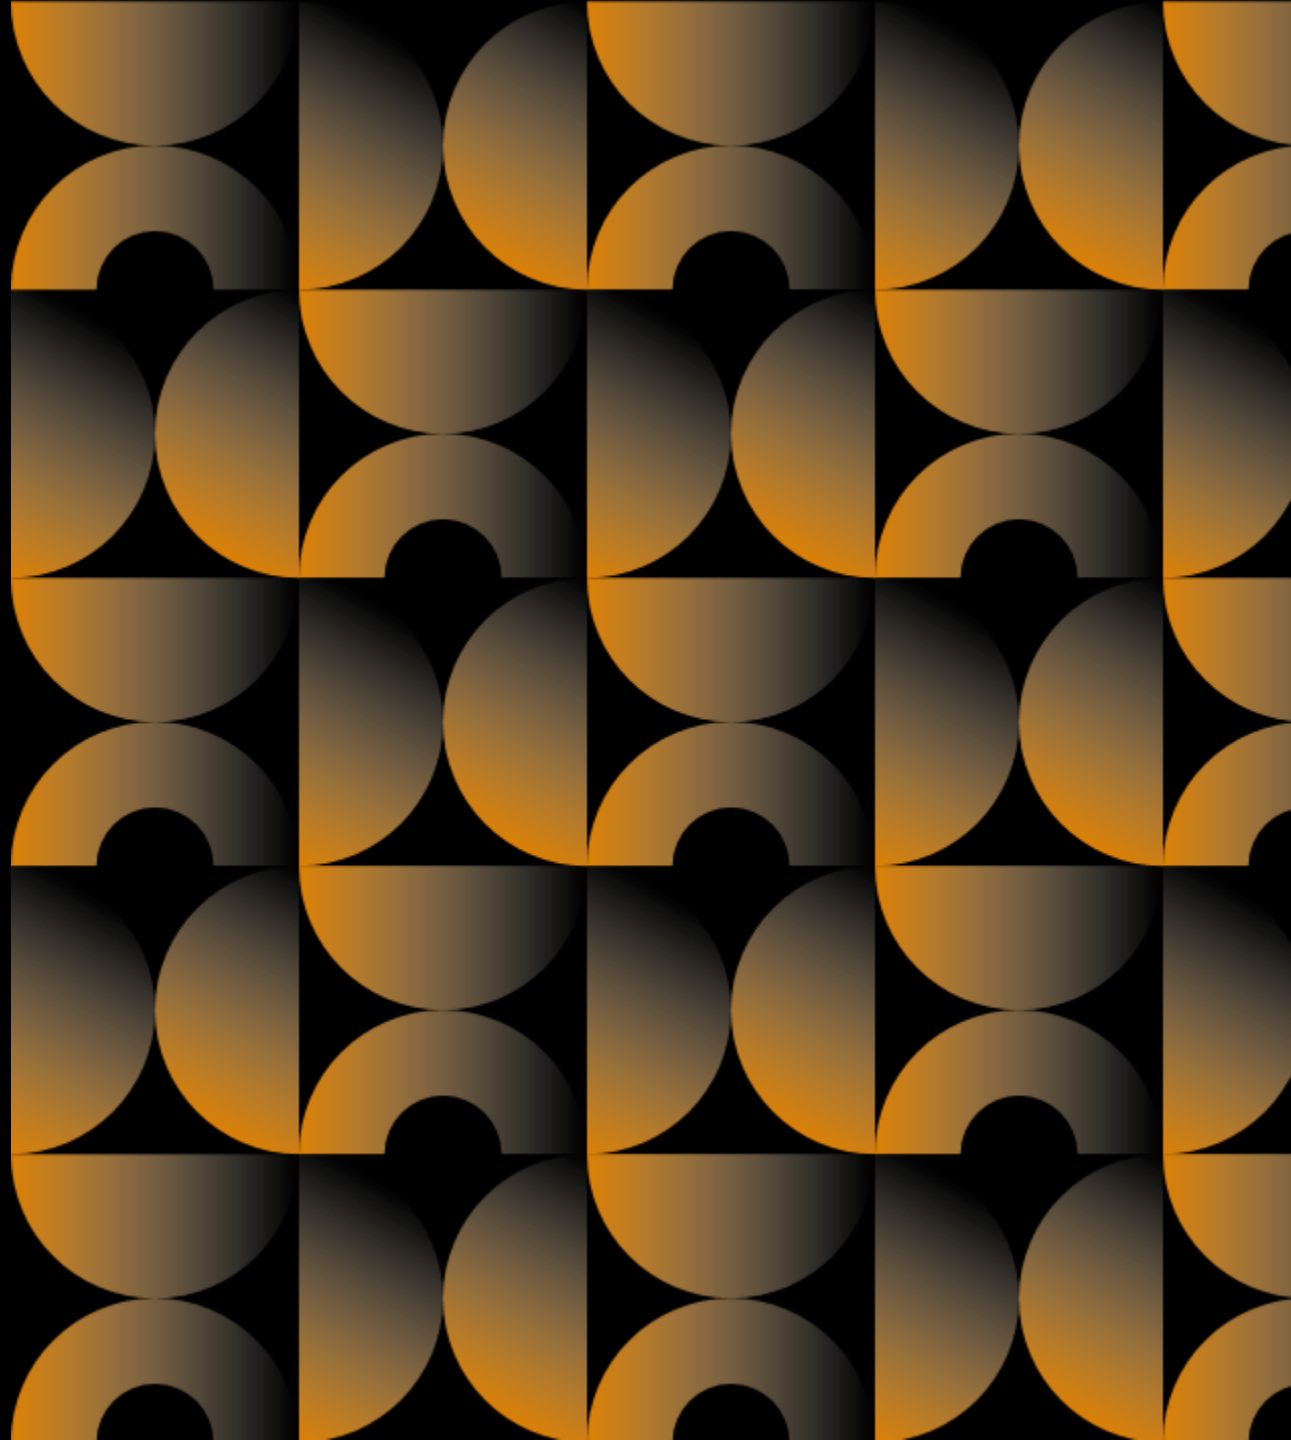


VALUEDRIVER

From manual to automation

Pain points

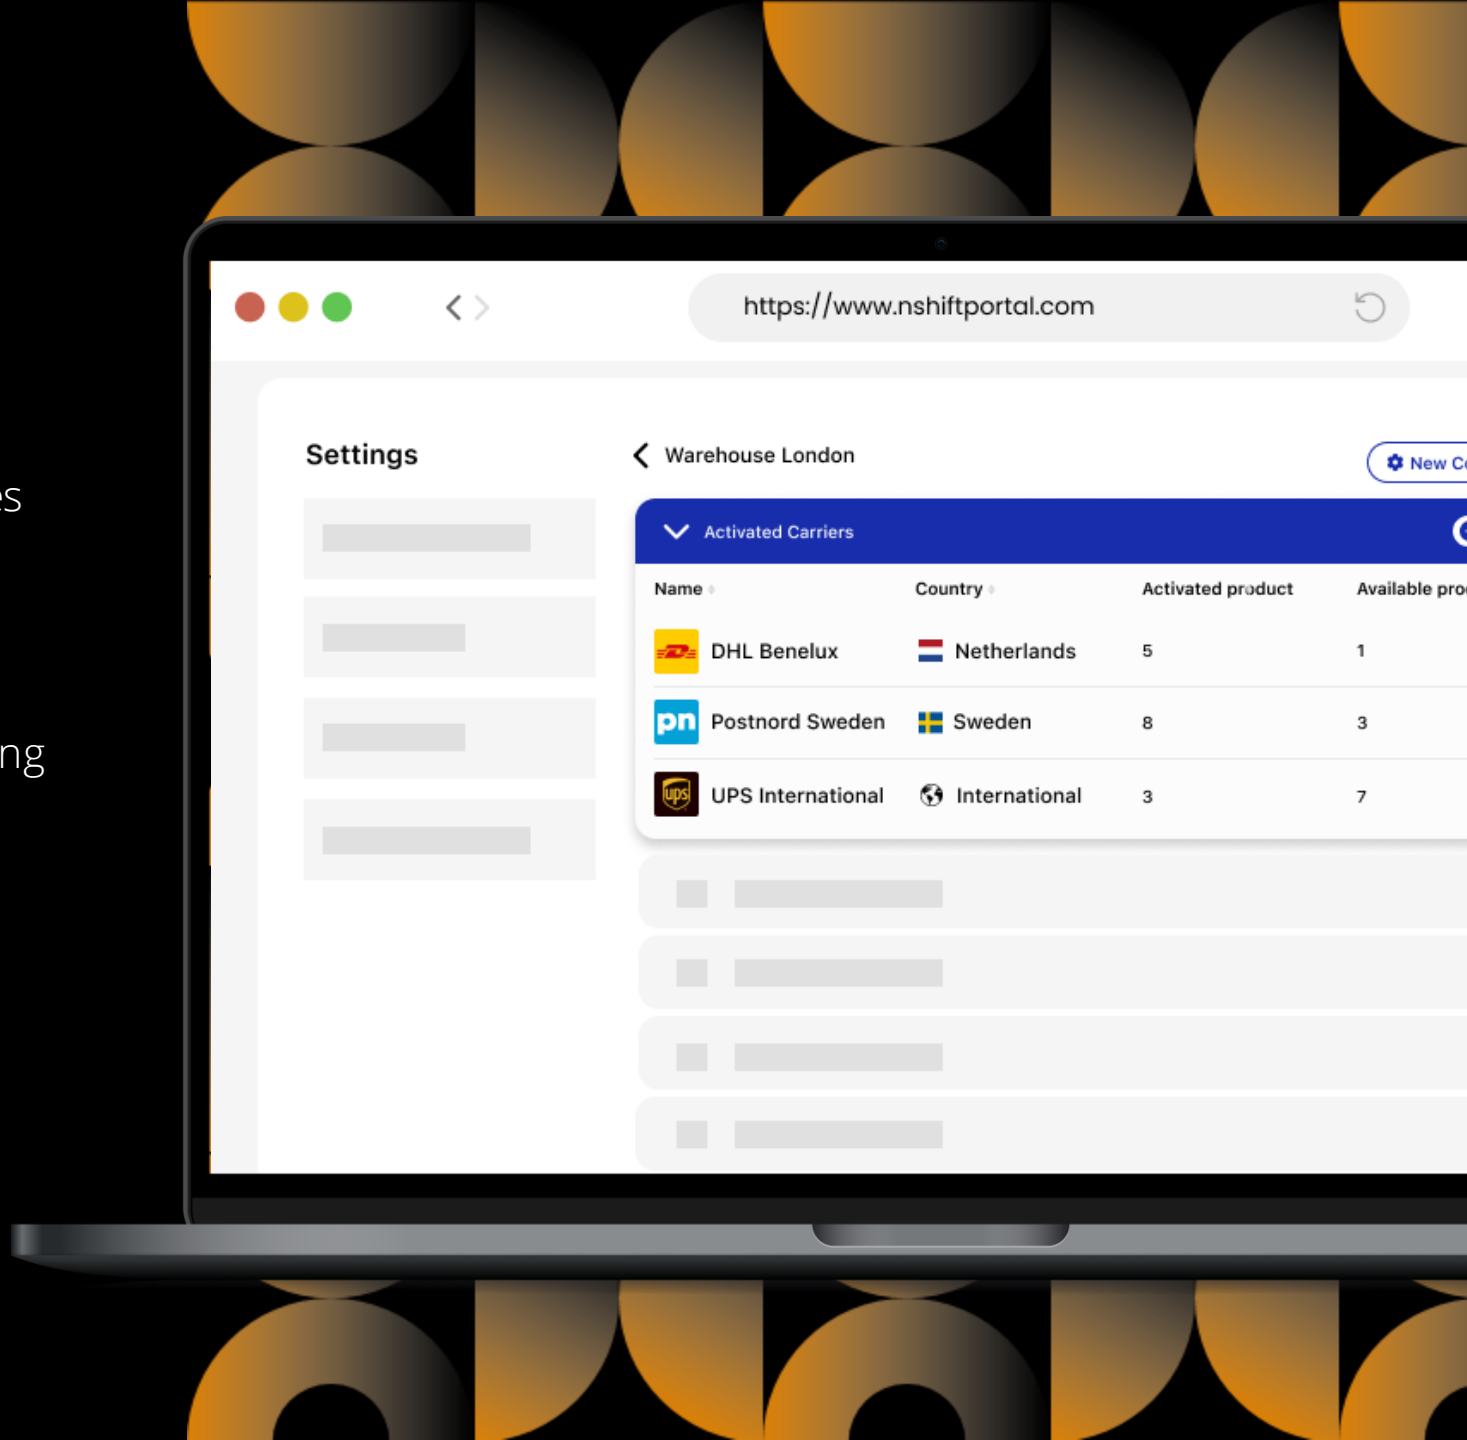
- High maintenance costs to maintain existing carriers
- New carrier implementation
- Multiple carrier integrations
- Consumer requirements
- Manual errors
- No control over transportation costs
- Manual customs and dangerous goods process



VALUEDRIVER

With nShift delivery management

- One API integration method to access the world's largest carrier library with 1000+ carriers & services
- No maintenance on the carrier connections
- Select the correct carrier and service based on customer requirements for example 2-man handling
- Customs process with carriers
- Insights in transportation costs
- Gain control over your shipments



DELIVERYMANAGEMENT

All in one place

Online dashboard
Access to all your shipments.

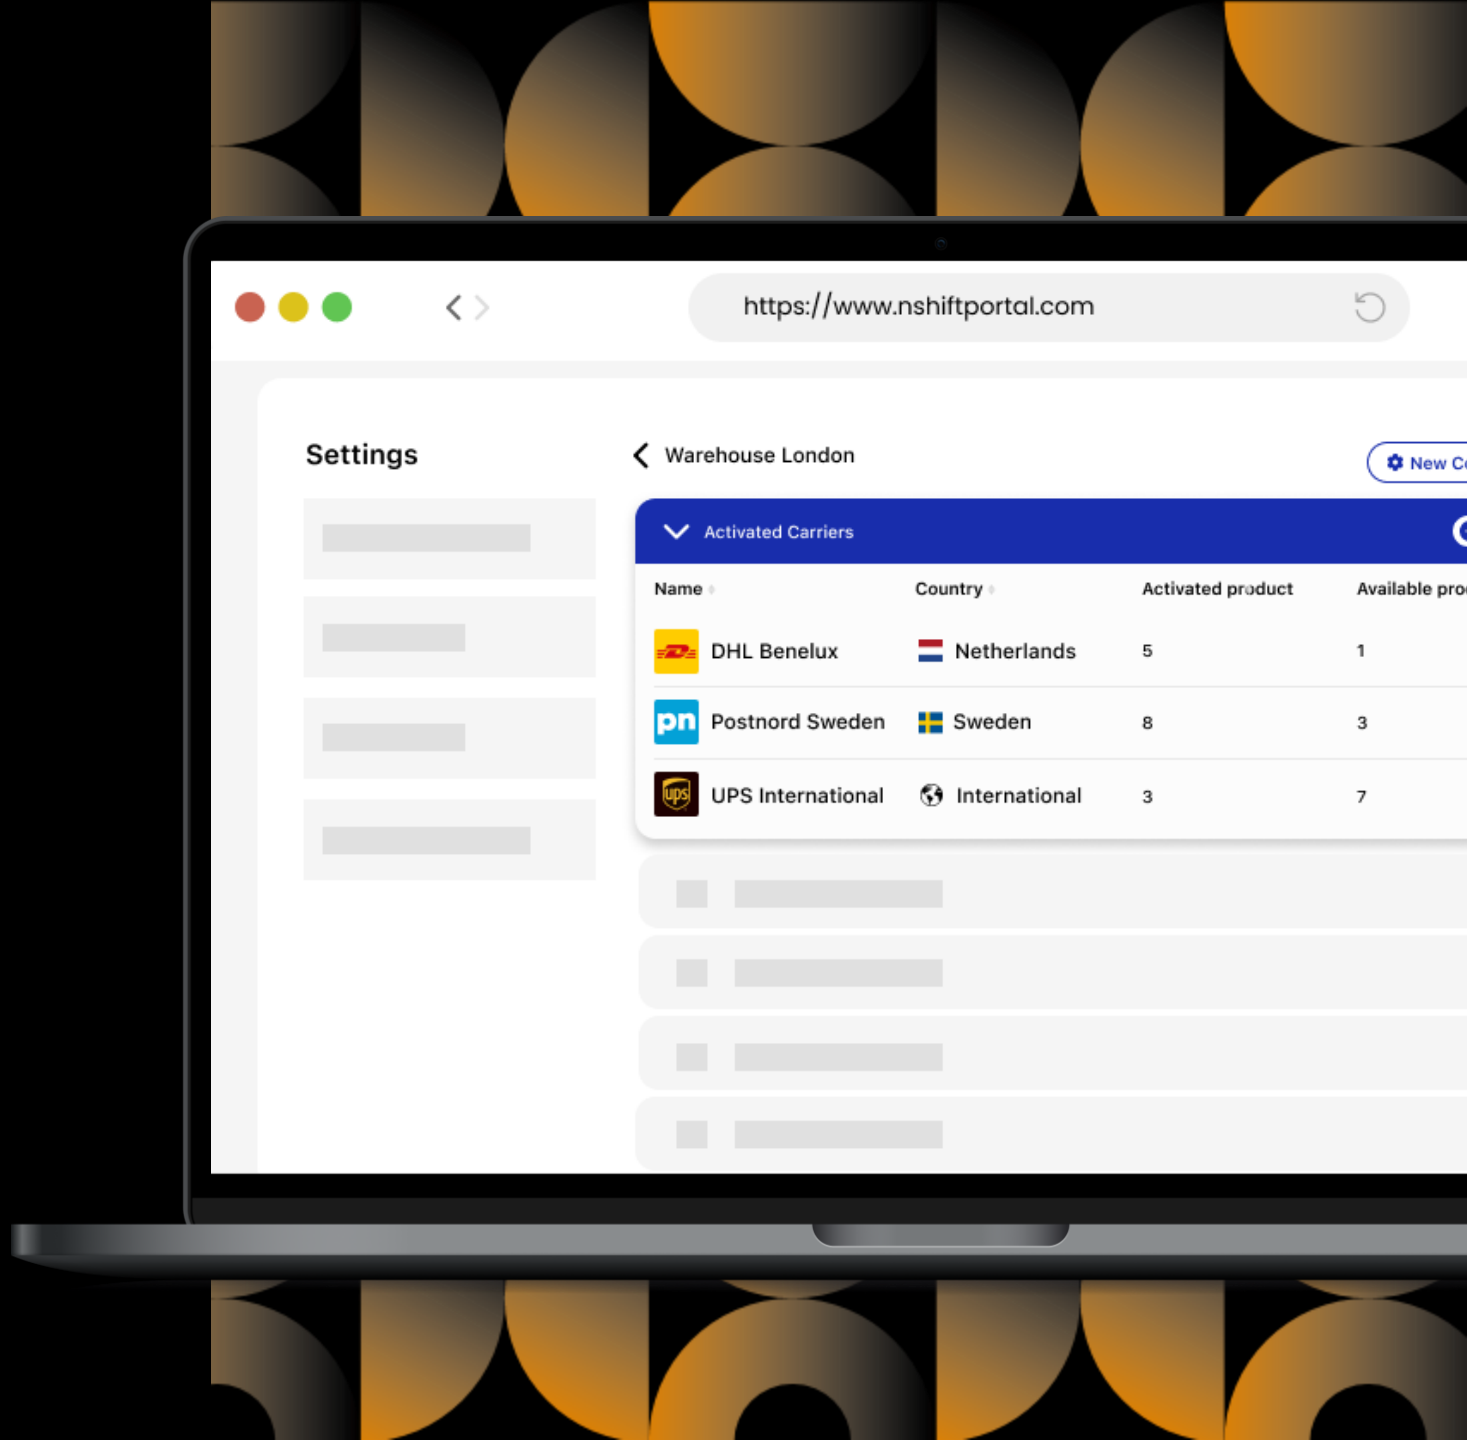
Self service capabilities
Configure account, carrier and user settings.

Shipment booking & manifesting
Generate and book shipments with over 1000+ carriers.
Automate manifesting process.

Label printing
Automatically print or receive labels in multiple sizes and formats.
Return label handling.

API integration
Via partner (Involve partner team)
Customer self build

Shipping rules
Automated selection on carrier and carrier products based on pre-defined rules



With 3,000+ stores in more than 50 countries across the world, JYSK have many years' experience of shipping truckloads of goods from distribution centers to stores. But when they launched their webshop in 2010, it soon became clear they needed a more sophisticated approach.

40% improvement in warehouse picking efficiency

nShift has helped JYSK create a streamlined, scalable delivery process by integrating with their WMS, enabling faster label creation, efficient batch picking, and rapid carrier onboarding across new markets.

"

Shipments for our stores were a 'business as usual' process. However, with e-commerce you have all these different parcels that need to have their own individual labels as they will be sent with different carriers depending on the size of parcel and the end destination. We realized that we needed a system that could automate the shipping process, print labels and connect to multiple carriers all in one place.
